ROAD DEPARTURE MITIGATION SYSTEM

with Lane Departure Warning

Alerts and helps to assist you when the system detects a possibility of your vehicle unintentionally crossing over detected lane markings or approaching the outer edge of the road surface through slight steering wheel vibration as well as a warning display.

COLLISION MITIGATION BRAKING SYSTEM

This system is designed to alert you when a potential front collision is determined, as well as to reduce your vehicle speed to help minimise collision severity when a collision is deemed unavoidable.

LANE KEEPING ASSIST SYSTEM

Prevents the vehicle from drifting into adjacent lanes by detecting lane markers on the road and uses autonomous steering to keep the vehicle centred.

HIGH BEAM SUPPORT SYSTEM

Automatically changes your headlights from low beam to high beam on a clear road, and then back to low beam when an oncoming vehicle is detected.

ADAPTIVE CRUISE CONTROL

with Low Speed Follow

Helps maintain a constant vehicle speed and a set following interval behind a vehicle detected ahead of yours and, if the detected vehicle comes to a stop, can decelerate and stop your vehicle.
